Of the three generations of modern 20mm MF Nikkor (f/4.0, f/3.5, and f/2.8), all these years later the f/3.5 arguably holds up as the best compromise of qualities for use on digital. The f/4.0 was a legend in its day, but vignettes like crazy and many surviving examples are somewhat mediocre performers due to age and abuse.

NIKON D750 + 20mm f/1.8 @ 20mm, ISO 720, 1/40, f/5.6. Having previously used and tested the Nikkor 28mm f/1.8G, I found 28mm on full-frame to be a bit too long for my taste, so I kept my 24mm f/1.4G prime as my workhorse for those wide angle moments. Those 4mm of additional focal length might not seem like a lot, but there is a pretty big difference!

### **Nikon 20mm f/1.8G ED Review - Photography Life**

The Nikkor AF 20mm f/2.8 D had a very good reputation during the film era but the D200 didn't really like the lens. The resolution is fine for most of the APS-C image frame but the extreme corners never really reach impressive results even at medium aperture settings. Vignetting is fairly high at f/2.8 and CAs are pretty bad.
