Little Monitor pumping engine. The full size 1-1/4 HP engine was known for its reliability. Thousands of these engines were used across the country. By 1941 the 3 HP horizontal and the Monitor pumper were the only engines in production. This is a pretty little model engine and a challenging build.

Executive Model Design - minicastings.com

To make a steam engine out of a soda can, you'll need an empty soda can, pliers, a tea light, an 8-inch piece of copper tubing, and a bowl of water. The engine works by using heat from a candle to evaporate water, which creates steam to form jets that propel the engine. To start, cut the bottom off of a soda can and place a tea light in it.

Elmers Engines Steam Engine Plans - John-Tom

This engine was designed following a number of requests for a simple machining project. There are many other oscillating steam engine designs, and some are much simpler, using plumping fittings and wire links etc... However because this engine was designed to be a machining project, bar-stock was used for all the parts.
