Ordered Normal (in the order topology) The product of two ordered (even well-ordered) spaces need NOT be normal: \mathbb{R} is not normal. Well-ordered: $(a, b] = (a, b+1)$ are open and form a basis, cover each closed set with such intervals that do not intersect the other set. General case (ordered): covered, for example, in Steen, Seebach, Counterexample 39, 1-6.
