The late model turbocharged MINI 4-cylinder engines, used in the US market Cooper S and JCW (John Cooper Works) models, are produced in two variants; the N14 and the N18. The use of either the N14 or the N18 engine is dependent on the production year and there should be no confusion .... except for the 2011 & 2012 model year JCW variants.

If you own a Mini Cooper N14 you may have read or heard of the myth that N14 engine has a weak engine or a piston cracking issue. We personally don't agree with everyone's opinion that the internals on the N14 are weak. It is a miss understanding due to a lack of knowledge of the MCS engine, turbocharger, and emissions system.

The BMW versions of the Prince engine are known as the N13 and the Mini versions are known as the N14 and N18. It replaced the Tritec engine family in the Mini and was first introduced in 2006 for MINI. Later in 2011 also for BMW models F20 116i and 118i. This was the first longitudinal engine mount option for Prince engine.

I have been reading online that the VANOS solenoid can also cause this problem by getting plugged up with goop. But I can not figure out where it is located on the N14 engine. All I can find is info for the N12, N16 and N18 engine. Does anyone have any idea where it is located? Edit: I got the actuator replaced today with the next gen one.
